 ***Lasius niger*** Black garden ant							■	■						
 ***Lasius flavus*** Yellow meadow ant							■	■	■				Afternoon	
 ***Myrmica rubra*** European fire ant								■	■					

How to spot a flight

1. Flights start on warm, calm days, often the first sunny afternoon after rain.
2. Look on pavements, walls and lawns: winged queens and males pour out of small holes, with workers rushing around them.
3. Queens that have lost their wings have mated: those are the ones to collect for a new colony.
4. Check your local rules first, and only take a few queens: most species fly over several days.

Beginner · After rain · Hot days · Humid air · Calm weather

Months for temperate Europe and the Mediterranean. The weather decides the exact days, so flights can come earlier or later where you live.
