NUPTIAL FLIGHT CALENDAR

North Macedonia

8 species with a care sheet, and the months their queens fly.

SPECIES	J	F	M	A	M	J	J	A	S	O	N	D	TIME OF DAY	WEATHER
Camponotus lateralis				■	■								Afternoon	
Camponotus vagus Hairy carpenter ant				■	■	■							Afternoon	
Manica rubida				■	■	■							Morning	
Tetramorium immigrans Immigrant pavement ant					■	■	■						Morning	
Tetramorium caespitum Pavement ant						■	■	■					Morning	
Temnothorax unifasciatus							■	■					Morning	
Aphaenogaster subterrane...							■	■	■				Evening	
Messor wasmanni Wasmann's harvester ant									■	■	■			

How to spot a flight

1. Flights start on warm, calm days, often the first sunny afternoon after rain.
2. Look on pavements, walls and lawns: winged queens and males pour out of small holes, with workers rushing around them.
3. Queens that have lost their wings have mated: those are the ones to collect for a new colony.
4. Check your local rules first, and only take a few queens: most species fly over several days.

Beginner · After rain · Hot days · Humid air · Calm weather

Months for temperate Europe and the Mediterranean. The weather decides the exact days, so flights can come earlier or later where you live.
